

ABSTRACT

An impurity disposal system according to the present invention is used for disposing underground, impurities in a natural gas (or an oil accompanying gas) (11), and
5 includes an impurity removing apparatus (13) that removes the impurities in a gaseous state, a compressor (15) that compresses removed impurity gas (12) and that is driven by a drive (14), and a drying apparatus (18) that removes a
10 water (17) in compressed impurity gas (16), wherein dried and compressed impurity gas (19) is disposed into an underground aquifer (20).
